

# 2.5% MAGNESIUM EDTA

## 0-0-9

### General Information:

This product is a fully chelated solution of magnesium EDTA and is recommended for the prevention and correction of magnesium deficiency in crops

### Directions for Use:

2.5% MAGNESIUM EDTA is compatible with most pesticides as well as Orthophosphates, APP or liquid N fertilizers commonly used in "2x2" placement as starter fertilizer, in a band, or in broadcast application.

*NOTE: Foliar application alone should not be a substitute for soil application. However, if foliar application is required, it may be applied 30 days after planting and before flowering to correct deficiency. Application rates and dilution factors will vary and depend on crop sensitivity and amount of foliage to be sprayed. Dilute in a minimum of 50 gallons of water. If there is any doubt, apply the spray solution to a small test area of the crop or foliage to assess any undesirable effects or phytotoxicity before general application. Always conduct a jar test with new tank mixes to verify compatibility.*

### Recommended Rates:

The optimum rate and timing of application will depend on local conditions and should always be made as a result of soil and/or plant tissue analysis in consultation with your local agricultural authorities.

#### Broadcast or Band Applications:

Severe Deficiency .....	4-8 qt/acre
Moderate Deficiency .....	2-4 qt/acre
Maintenance .....	1-2 qt/acre

This product may be corrosive to aluminum, mild steel, and/or brass if not diluted. Copper or any of its alloys (brass or bronze) should never be used in any chelate handling system. Store in fiberglass, polyethylene or stainless steel containers/tanks. Do not mix or contaminate with strong acid materials.
